Nguyen Mai Tuong Vy

Full Stack Developer

0814 914 956 vynmtse181954@fpt.edu.vn https://github.com/Vynmt198 Q9, Ho Chi Minh

OBJECTIVE

Passionate about Full Stack development, seeking an internship to apply skills and gain real-world experience. Short-term goal is to become a Junior Front-End Developer, aiming to grow into a Senior Front-End Engineer within 3 years.

EDUCATION

FPT University Ho Chi Minh 2022 - 2026

Major: Software Engineering | **Semester:** 5/9

Area of Specialization: ReactJS

- Specialized in Frontend Development with a strong focus on **ReactJS** and modern JavaScript (ES6+).
- Gained solid knowledge in Web Development, Object-Oriented Programming, and RESTful APIs.
- Developed various projects using **ReactJS**, including dynamic interfaces and API integration.

PROJECT EXPERIENCE

HIV Treatment and Medical Services System | SWP Course - Team Project Jun. 2025 - Present

Backend Developer

Brief:: A full-stack web application designed to support HIV-related healthcare services in clinics. The system allows patients to register, book appointments, receive ARV treatment, and communicate with doctors. Admins and doctors can manage services, track treatment progress, and access patient records securely.

Techs: Spring Boot (Java), Maven, SQL Server, RESTful API, JWT Authentication, Role-based Authorization, Postman, Git, GitHub, (Frontend: ReactJS, Axios, TailwindCSS – team member)

URL: https://github.com/Vynmt198/hiv-treatment-backend

Role: Leader - Backend Developer

Main Responsibilities:

- Designed and developed a secure backend system using **Spring Boot & Maven**, applying **RESTful architecture** and **JWT-based authentication** with role-based access for Patients, Doctors, and Admins.
- Built database schema in **SQL Server** with over 15 interrelated entities such as Users, Appointments, Doctors, ARV Regimens, and Medical History.
- Implemented APIs for user registration, appointment scheduling (with doctor assignment), anonymous consultation requests, medical history retrieval, and test result tracking (CD4 count, viral load).
- Developed ARV regimen management for doctors to select or customize treatment plans (e.g., TDF + 3TC + DTG for women or children).
- Enabled doctors to manage schedules, qualifications, and patient interactions securely.
- Created APIs to support blog post listings, educational material sharing, and stigma-reducing content.
- Built admin dashboard APIs for analytics and treatment reports.
- Collaborated with frontend via **Postman** for endpoint testing and **GitHub** for version control.

Key Functionalities:

- Public homepage with educational materials and experience-sharing blogs
- HIV treatment appointment booking with doctor selection
- Anonymous consultation option for patients fearing stigma
- ARV treatment tracking with test result history (CD4, viral load)
- Doctor management: profile, expertise, schedule
- Full patient record and treatment history management
- Dashboard and reporting for medical staff

Pico.vn – E-commerce Database System | DBI Course - Team Project Jul. 2024 - Oct. 2024

Database Designer

Brief: A comprehensive database system developed for **Pico.vn**, an e-commerce platform selling electronic and household appliances. The project aims to support core business operations such as customer management, product listing, order processing, online payments, promotions, logistics, and post-sales services.

Techs: SQL Server (SSMS), T-SQL, ERD Design, 3NF Normalization, Stored Procedures, Relational Modeling

URL: https://github.com/Vynmt198/picosqldb_dbi

Role: Team Leader – Database Designer

Main Responsibilities:

- Led the design of a scalable relational database for a real-world e-commerce platform.
- Wrote the **data requirement specification**, identifying 16+ entities including Customers, Products, Orders, Payments, Promotions, Returns, Warranty, and Shipping.
- Designed the **ERD** and transformed it into a fully normalized **relational model** (achieved 3NF/BCNF).
- Defined detailed **constraints**, data types, and **business rules** for all tables.
- Implemented the database using **SQL Server**, including data population with sample records.
- Developed **stored procedures** and **business transaction scripts** for real scenarios such as placing orders, managing carts, processing payments, product returns, and customer support.
- Participated in team documentation, report writing, and presented the project during final defense.

Key Features:

- Multi-role user management (Customers, Admin, Support Staff)
- Order processing with tracking and shipment integration
- Dynamic promotion/voucher management
- Product warranty and return/refund tracking
- Scalable shopping cart system
- Full-text product review & rating system
- Location-based inventory handling

TECHNICAL SKILLS

Programming Languages:	**C** - *Programming Fundamentals* (4 months) | **Java -** PRO192: *Object-Oriented Programming* (4 months), LAB211: *OOP with Java Lab* (4 months), PRJ301: *Java Web* (4 months)Spring Boot (4+ months)
Frontend:	**HTML & CSS** (5 months) | **ReactJS** (4 months) - component-based design, props/state, API consumption, responsive UI
Database & Backend:	**SQL Server** 2019+ (4 months) - *DBI202: Database Systems* | **Spring Boot** (4 months) - used in personal full-stack project (JWT auth, RESTful API, Maven) | Postman for API testing | JWT for user authentication
IoT & Embedded Systems:	**Arduino** (4 months) – IOT*: Internet of Things* course using Arduino IDE and sensors (sound, distance, LED strip)

SKILLS

English: Proficient in basic workplace communication - able to listen, speak, read, and write effectively (equivalent to IELTS ~5.0)

Teamwork: Strong collaboration and group work skills

Office Tools: Proficient in Word, Excel, PowerPoint

CERTIFICATES

Academic Skills for University Success - Coursera, The University of Sydney	Sep 13, 2023
Web Design for Everybody: Basics of Web Development & Coding - Coursera, University of Michigan	Sep 14, 2024
Core Java for Complete Beginners - Coursera, LearnKartS	Jan 18, 2025
Amazon Junior Software Developer - Coursera, Amazon	Jan 18, 2025
Software Development Lifecycle - Coursera, University of Minnesota	Feb 5, 2025
User Experience Research and Design - Coursera, University of Michigan	May 21, 2025
